AC50

POWERFUL & PORTABLE

The LP Energy AC50 is a powerful portable power generator and delivers the same voltage and quality as standard main power supply. Thanks to the AC50, almost all electrical devices up to 300 W can be supplied with power without any problems. This is ideal when you're camping, sailing or just traveling!

With the AC50 you always have power. You can charge the generator via AC power, your car or with 14 V to 40 V solar panels (6-7 hours to fully charge the wireless generator via a power outlet, 4-5 hours to fully charge it with a 120 W solar panel). Thanks to the integrated MPPT, the generator is also effectively charged via the sun in slightly cloudy weather.

The LP Energy power generator is specially designed for devices such as a lamp, computer, small fridge, fan and a charger for various accessories. The generator has the option of wirelessly charging your mobile phone. The AC50 comes with a charger for your wall socket, a car charger and a MC4 charging cable for solar panels. In addition, a carrying case and manual are also supplied, in combination with a warranty card and qualification certificate.
