AC100

POWERFUL FOR RECREATIONAL PURPOSES

The LP Energy AC100 is a powerful portable power generator and delivers the same voltage and quality as the main power supply. Thanks to the AC100, almost all electrical devices up to 600 W can be supplied with power without any problems. With the AC100 you always have power.

You can charge the generator via main power, your car or with 16 V to 40 V solar panels. Thanks to the integrated MPPT, the portable power generator is also effectively charged via the sun in slightly cloudy weather. With the supplied MC4 cable, the generator can be connected to almost any MC4 solar panel. The AC100 is also equipped with an LED lamp at the rear.

The LP Energy power generator is a high-quality product and is generally used for recreational purposes. This generator has been specially designed for powerful devices such as a drill, hair dryer, small fridge, TV and as a charger for various accessories. The portable generator comes with a charger for your wall socket, a car charger and a MC4 charging cable for solar panels. There is also a manual with a warranty card and qualification certificate.
